

We can help!

Device Content/Data Transfer

Allows you to move photos, text messages, emails, and other files and applications between devices.

INSTRUCTIONS FOR: Enabling / Creating an iCloud Backup

Before you begin

Make sure that you are connected to Wi-Fi, have the latest version of iOS or iPadOS and that you are signed in with your Apple ID. You will also need to have enough iCloud storage available to complete the backup.

If you need help with any of these items, please review the '**Getting Started with iCloud Backup**' document.

Enable / Create an iCloud backup

Go to **Settings** > **[Your Name]**, and then tap **iCloud**.

Review the list of Apps using iCloud and turn off any that you don't want to backup.

Scroll to find and tap on **iCloud Backup**. By default, this option is turned on when you sign in with your Apple ID.

If iCloud Backup is off, select the toggle to enable automatic backups. If you disable this feature, your last backup* is stored for 180 days.

Tap **Back Up Now** to create a backup. Stay connected to the same Wi-Fi network until the backup is complete.

*The time and date of your last backup is displayed on the screen.
